GO DIGITAL FOR BETTER DENTISTRY

Date: Wednesday, October 15, 2014

Time: Registration: 5:30pm Program: 6:00 – 9:00 pm

Location: Biogenic Dental Corporation
282 Genesee Street, Utica, NY

**2 CE
CREDITS**

Dinner and refreshments will be served

Course Description:

This seminar explores the multiple challenges today's modern clinicians face when choosing the correct restorative materials for patients. Learn how easy it is to integrate intra oral scanning methods and the latest advances in CAD/CAM equipment into the process. The course will focus on the latest design technologies and monolithic restorative materials to support the esthetically oriented dental practice and laboratory. Effective communication between the patient, dentist, and the laboratory is the key to creating a specific and optimal treatment plan for a successful final esthetic result.

At the completion of this course, participants will be able to:

- Enhance communication with the laboratory through digital prescriptions
- Pick an appropriate bonding or cementation technique for monolithic zirconia and lithium disilicate materials
- Identify the best restorative material selection for anterior, posterior, and implant supported restorations being scanned, designed, and fabricated digitally

To Register contact Maryanne Reale at 315-431-0340

Presenter Bio

Jason Rogers studied at the UCLA Center for Esthetic Dentistry and has been in the dental industry for over 10 years. Jason has a deep understanding of the complete treatment workflow from surgical to restorative procedures. Jason has presented CAD/CAM technology, dental materials and implant surgical procedures to clinicians and dental laboratories across the world.

The federal government imposes certain restrictions on, and requires public reporting of, transfers of value to a practitioner, including educational programs to the extent that less than a fair market value for such program is paid. Your Henry Schein representative can advise you of the reportable amount.
